

Frequently Ordered Special Fence Droppers

This drawing is intended to assist with enquiries for special (non-standard) droppers. The droppers shown here represent our standard product range **plus only some** frequently requested special droppers. We manufacture special droppers to suit nearly any combination of wire spacings. Do not be restricted to what you see here.

Insulated Versions Available

All droppers pictured here (in fact any dropper at all) can be supplied in an INSULATED VERSION to suit electric fences.

Some of the droppers pictured are variants on standard versions:

- With the top spacing slightly increased to fit a top wire running along the top slot of the Star Post® eg FD693
- Other variants are intended to achieve a deep panel with a minimum of line wires eg FD491

Measuring Droppers

Overall dropper length is the sum of listed spacings (to nearest 0.5cm or 0.5inch)

We are happy to accept orders with spacings accurately expressed in inches

We can accept orders with spacings specified to 0.5cm - we supply to a tolerance of +/- 2.5mm

NB The minimum spacing between wires has recently been reduced to 7.5cm. (This helps with line wires that use Star Post Holes 3 to 8 shown in the drawing.)

MAXIMUM DROPPER LENGTH is unchanged at 120cm

Pricing— Please consult the current price list

Standard droppers are always in stock and are identified in the drawing by the BOX symbol.

Droppers pictured without colour code or box are non-standard.

Other Types of Fencing

We also have droppers (with drawings available) to suit:

- Various pre-cast concrete posts
- Prefabricated fencing—ring lock and hinged joint
- Timber posts
